DETAILED ACTION

Specification

The application has not been checked to the extent necessary to determine the presence of all possible typographical and grammatical errors. Applicant's cooperation is requested in correcting any errors of which he/she may become aware in the application.

The Information Disclosure Statements filed 03/17/2004 have been considered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 8, it is unclear what is meant by "...first and second amplifying units than said one input locus..." Clarification is required.

Claims 2-4 are also rejected because they depend on claim 1 which has been rejected under 35 U.S.C 112 2nd paragraph.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Application/Control Number: 10/803,128

Art Unit: 2819

Claims 1-12 are rejected under 35 U.S.C 102(a) as being unpatentable over the prior art of figure (1) provided by the applicant.

The provided prior art teaches in figure (1) a current -mode multi-stage analog-todigital converter apparatus and method, each stage comprising:

- (a) a residue amplifier (12) including a first amplifying unit (20) and a second amplifying unit (30), each of said first and second amplifying units having an inverting input locus (24) and (34), a non-inverting input locus (22) and (32); each of said first and second amplifying units receiving a differential input data signal at one of said inverting input locus and non-inverting input locus;
- b) a DC level setting unit in the form of NPN digital-to-analog converter (14) coupled to the other input loci of said first and second amplifying units, the DAC (14) having a current source (58) that applies in a first direction a first current signal I_{np} that provides a DC level setting signal for each of said first and second amplifying units; signals presented at said output loci substantially representing said input data signal less said DC level setting signal (See page 4, lines 13-16 of applicant's specification);
- (c) a counter-current signal generating unit in the form of PNP digital-to-analog converter (16) coupled with said other input loci at a single coupling locus, said counter-current signal generating unit presenting a second current signal I_{pn} in a second current direction opposite to said first current direction and providing a DC level control signal for each of said first and second amplifying units.

CONTACT INFORMATION

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Lauture, whose telephone number is (571) 272-1805. The examiner can normally be reached Monday thru Friday between 9:30 am

and 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Tokar can be reached at (571) 272-1812. The fax number for the organization to which this application is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the group receptionist whose telephone number is (571) 272-1562.
